

WALT: To be able to identify odd and even numbers.

Thursday 2nd July 2020

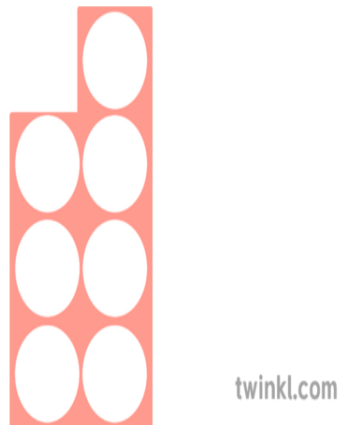

**Warm up:** <https://www.youtube.com/watch?v=x1EGRUXmNdY> - Count by Odd Numbers & Exercise | Counting Song for Kids | Skip Counting Odd Numbers | Jack Hartmann

We are continuing to learn about odd and even numbers.

Step 1: Print out the numicon pieces and cut each one out. Remember to have your thumb at the top of the scissors when cutting as “the thumb is the boss”.

Step 2: Print out the posters. Next choose a numicon piece and decide if it is an odd or even number then put it on the right page accordingly. Remember our rule, if a piece does not have a friend then it is odd, if it does have a friend then it is even.

For example, 7 is odd as it does not have a partner at the top.

10 is even as all the holes have a partner.

Have fun odd and even number detectives!
